

## Taming Turbulence

Turbulence can run the gamut from a choppy annoyance to creating loss of control and safety of flight events. Knowing how to detect and avoid turbulence is a critical part of flight planning, managing passenger expectations or even making a go/no go decision. We'll review the latest tools to help you determine where turbulence currently exists, where it's forecast to develop and how to better use those insights to plan and operate in order to minimize the impact of turbulence on future flights.

**Directions:** Flying Education Center—booth 1324. While the seminar itself is free, there may be registration or other fees associated with Flying Expo.

### A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at [www.FAASafety.gov](http://www.FAASafety.gov)!

The FAA Safety Team (FAASTeam) is committed to providing equal access to this meeting/event for all participants. If you need alternative formats or services because of a disability, please communicate your request as soon as possible with the person in the "Contact Information" area of the meeting/event notice. Note that two weeks is usually required to arrange services.
